List of VDV Recommendations and VDV Reports

May 2021
Preface

In this list of the Association of German Transport Companies (VDV) presents the VDV Recommendations and VDV Reports and the regulatory frameworks of relevance to the public transport and rail freight transport sector.

Further publications are found in the Internet under www.vdv.de

The large quantity of publications impressively demonstrates the broad range of tasks to which the VDV is devoted. You are very welcome to use the specialist knowledge gathered in these publications by our internal and external experts for your work.

You can order the publications of interest in several ways. The publications listed on the following pages have been published by different publishing houses. To simplify the ordering procedure, we inform you of the correct way of calling a publication directly at each publication.

VDV Recommendations

According to its Articles of Association the VDV prepares standard recommendations and rules concerning operational, legal and technical subjects in working groups and together with other interested parties. VDV’s preparing rules, VDV Recommendations and VDV Reports means that it fulfils its object, i.e. to prepare expert solutions, standard recommendations and rules by consensus on the basis of the extensive operational, legal and technical experience and knowledge of representative experts for the benefit of the entire sector.

VDV Recommendations are prepared by VDV committees. They circulate under an enquiry procedure before they are published. At this stage all VDV member companies and – if relevant – industrial enterprises and other associations can give their views on the draft publications. In this way broad consensus is ensured. The VDV Recommendations are numbered consecutively within a number range relating to the relevant subject areas, which appear from the below overview.

In the column "Language" a "D" indicates that the publication has been published in German, an "E" that an English version exists, and an "F" that the publication is available in the French language. If there is no entry in the column "Order", the VDV Recommendation can be purchased here:

According to its Articles of Association the VDV prepares standard recommendations and rules concerning operational, legal and technical subjects in working groups and together with other interested parties. VDV’s preparing rules, VDV Recommendations and VDV Reports means that it fulfils its object, i.e. to prepare expert solutions, standard recommendations and rules by consensus on the basis of the extensive operational, legal and technical experience and knowledge of representative experts for the benefit of the entire sector.

VDV Reports are to inform VDV member companies about special subjects. Contrary to the VDV Recommendations they do not circulate under an enquiry procedure before they are published. The VDV Reports are numbered consecutively within a number range relating to the relevant subject areas, which appear from the below overview.

In the column “Language” a “D” indicates that the publication has been published in German and an “E” that an English version exists. If there is no entry in the column “Order”, the VDV Report can be purchased here:

BOStrab mainly includes general statements. Concrete technical rules are given in separate regulations.

Please contact the following VDV experts if you have any questions or would like further information about BOStrab:

Technical aspects: Udo Stahlberg (special fields: electrical power installations and funicular railways) · stahlberg@vdv.de · T +49 221 57979-132

Legal aspects: Daniel Brand (special fields: environmental, energy and technology law, sectoral planning law for public transport) · brand@vdv.de · T +49 221 57979-116

Operational Rules for Railway Undertakings

The Operational Rules for Railway Undertakings are VDV’s recommendations on the regulations that each railway undertaking has to prepare to fulfil its duty for safety and to meet the requirements specified in TSI OPE.

The Operational Rules for Railway Undertakings support the realisation of the high safety standards for railways in Germany and the uniformity of the railways. They also make it easier to realise company-overlapping training and co-operation. They are obtainable from: DB Kommunikationstechnik GmbH.

The expert committees of the VDV, especially by the committee of railway operation, refine the set of rules for railway undertakings (BRW; Betriebsregelwerk) continuous. The edition 4 (A 04) is the current version of this set of rules, which is in force since 15th December 2019. The edition 5 (A 05) was published in December 2020; its entry into force is recommended on 12th December 2021.

Railway Regulations for Non-federal Railways

The railway regulations, staff instructions and recommendations that the expert committees of the VDV prepare are the asis for the Regulations for Non-federal Railways. Some of them have been put into force upon special implementation decrees of the transport ministries of the German states and some of them are integral parts of the terms of use of the rail networks and the terms of use of the railway infrastructure operators’ service facilities in the form of technical and operational rules. Further information is found under: www.vdv-regelwerke.de

If you have any questions or would like further information about the Operational Rules for Railway Undertakings or the Railway Regulations for Non-federal Railways, please contact: Götz Walther (special field: railway operation) · walther@vdv.de · T +49 30 399932-13

Further information about regulations as well as further downloads concerning VDV Recommendations and VDV Reports: Download: www.vdv.de/downloads.aspx
